DAY-4 Hands-On

Level-1 Problem 1: Responsive Personal Portfolio Homepage

Scenario:

You are designing a responsive personal portfolio homepage for a fresher web developer who wants to showcase profile information, skills, and contact details.

📌 Requirements

- Integrate Bootstrap 5 using CDN.
- Create a responsive layout using container, rows, and columns.
- Use Bootstrap grid system with appropriate breakpoints.
- Include components such as navbar, cards (for skills), and buttons.
- Use utility classes for spacing, alignment, and colors.

🛠️ Technical Constraints

- Must use Bootstrap 5 CDN (no local files).
- No custom CSS except minimal styling if required.
- Use grid system (row and col classes) properly.
- Ensure responsiveness across mobile, tablet, and desktop.

Expectations:

- Clean UI with proper alignment.
- Proper use of breakpoints (sm, md, lg).
- Navbar collapses properly on small screens.
- Cards are evenly spaced.

🎯 Learning Outcome

- Understand Bootstrap setup using CDN.
- Learn responsive grid system and breakpoints.
- Implement basic Bootstrap components.
- Apply utility classes effectively.

Level-1 Problem 2: Product Listing Page Using Bootstrap

Scenario:

Create a responsive product listing page for an online electronics store displaying multiple products in card format.

📌 Requirements

- Use Bootstrap grid to display products in 1 column (mobile), 2 columns (tablet), and 4 columns (desktop).
- Each product should be displayed using Bootstrap Card component.
- Include buttons such as “Add to Cart” and “View Details”.
- Use spacing utilities and background color utilities.

🛠️ Technical Constraints

- Must use Bootstrap CDN.
- Use built-in Bootstrap classes only.
- Proper use of container, row, and col classes.

Expectations:

- Fully responsive layout.
- Equal card height alignment.
- Proper spacing using margin and padding utilities.

🎯 **Learning Outcome**

- Master grid layouts with multiple breakpoints.
- Use Bootstrap cards and buttons.
- Apply spacing and color utility classes.

Level-2 Problem 3: College Event Management Dashboard

Scenario:

Design a responsive dashboard for managing college events including event list, add event form, and navigation.

📌 **Requirements**

- Use Bootstrap navbar with collapse functionality.
- Implement responsive grid layout for dashboard sections.
- Use form components for event registration.
- Implement modal for adding new events.
- Use Bootstrap utilities for alignment and spacing.

🛠️ Technical Constraints

- Use Bootstrap 5 CDN.
- No external UI frameworks.
- Proper breakpoint usage (sm, md, lg, xl).
- Modal must work using Bootstrap JS bundle.

Expectations:

- Dashboard layout adapts across devices.
- Modal opens and closes correctly.
- Form fields use proper Bootstrap validation styling.

🎯 Learning Outcome

- Implement advanced components like modals.
- Create structured responsive dashboards.
- Apply responsive behaviors effectively.

Level-2 Problem 4: E-Commerce Landing Page with Advanced Features

Scenario:

Build a professional e-commerce landing page with hero section, product carousel, offcanvas menu, and themed design.

📌 Requirements

- Use responsive navbar with offcanvas menu.
- Implement Bootstrap Carousel for featured products.
- Create multiple sections using grid system.
- Use forms for newsletter subscription.
- Apply Bootstrap utilities for display control and alignment.
- Customize theme using Bootstrap variables or custom overrides.

🛠️ Technical Constraints

- Bootstrap 5 CDN required.
- Proper responsive behavior implementation.
- Offcanvas and Carousel must function correctly.
- Maintain consistent color theme.

Expectations:

- Professional UI design.
- Smooth functioning carousel and offcanvas menu.
- Responsive layout for all devices.

🎯 Learning Outcome

- Implement advanced Bootstrap components.
- Understand responsive behavior and display utilities.
- Apply custom theming concepts.
