Introduction to Table

- In HTML, tables can be used to display data in rows and columns.

- The basic structure of an HTML table includes the **<table>** element to create the table itself, the **<thead>** element to define the table header, the **<tbody>** element to contain the table body, and the **<tr>** element to create each table row. Within each row, table cells are defined using the **<td>** element.

Tables Are for Data

Indicator summary

The table below contains a summary of the indicator and, where applicable, links to the data provider and documentation.

indicator army_total
