# Overview

Introduction to img Element

Adding images to a page

Multiple sources

Using images in your page

# Introduction to img

---

- The `<img>` tag is a self-closing tag, which means it does not require a closing tag.
- The `<img>` element in HTML is used to insert an image into a web page.
- **alt** attribute provides alternative text to be displayed if the image cannot be loaded or if the user is using a screen reader.

```

```

## Including Images in a Page

src – where can the image file be found

alt – text to display or read in place of the image height / width –

control display sizing

```

```

## Alternate Image Sizes

Provide different sizes of the same image

Set viewport relative sizes based on the media query

# Using Images in Your Pages

A solid teal square.

Visual  
Communication

A solid maroon square.

Buttons or Links

A solid purple square.
