# Overview

## CSS Borders

### CSS Borders Styles

# CSS Border

---

The border-style property specifies what kind of border to display.

- **dotted** - Defines a dotted border
- **dashed** - Defines a dashed border
- **solid** - Defines a solid border
- **double** - Defines a double border
- **groove** - Defines a 3D grooved border. The effect depends on the border-color value
- **ridge** - Defines a 3D ridged border. The effect depends on the border-color value
- **inset** - Defines a 3D inset border. The effect depends on the border-color value
- **outset** - Defines a 3D outset border. The effect depends on the border-color value
- **none** - Defines no border
- **hidden** - Defines a hidden border

- The **border-width** property specifies the width of the four borders. The width can be set as a specific size (in px, pt, cm, em, etc) or by using one of the three pre-defined values: thin, medium, or thick:..

```
p.one {  
    border-style: solid;  
    border-width: 5px;  
}
```

```
p.two {  
    border-style: solid;  
    border-width: medium;  
}
```

- The border property is a shorthand property for the following individual border properties:
  - border-width
  - border-style (required)
  - border-color

```
p {  
  border: 5px solid red;  
}
```
