# Overview

## Introduction to non-Semantic Elements

### Examples of Non-Semantic Elements

# Introduction to Non-Semantic Elements

---

- Non-semantic elements in HTML are HTML tags that do not carry any specific meaning or convey any structural information about the content on a web page.
- These elements are used for styling or layout purposes, and do not add any semantic value to the content.

## Examples Non-Semantic Elements

---

- **<div>**: This is the most commonly used non-semantic element in HTML, and is used to group elements together for styling or layout purposes.
- **<span>**: This element is used to apply styling or formatting to a small piece of text within a larger block of text.
- **<br>**: This element is used to create a line break within a paragraph of text.
- **<hr>**: This element is used to create a horizontal line, which can be used as a visual separator between different sections of a web page.
- **<img>**: This element is used to insert an image into a web page.
